FARGO SEED HOUSE

Operated by Magill and Company

FARGO, NORTH DAKOTA

1887-1926

THE number of business establishments which have been doing business for thirty-nine consecutive years in North Dakota is very limited. In fact the State itself is only thirty-six years old so that before 1890 business was done in Dakota Territory. We take pardonable pride, therefore, in our history. It has been a history of continual progress toward bigger and better things, and with an ever increasing circle of customers and friends. It is our aim to continue this progress from year to year.

There is no need for us to thank you for the business you have sent us this past year and in years previous. You sent us your orders because you had confidence in Fargo Brand Seed and what stands behind it. We do prize that confidence, and will try to maintain it by being worthy of it.

Just a word about this catalog. You will notice we have added four more pages, devoting most of the new space to Garden Seed. This is in line with our yearly increasing sales in this department. Our stocks of vegetables and flower seeds are very complete. Bought in bulk direct from the growers we fill all of our own packages and boxes fresh every year, assuring high quality and germination.

Dealers throughout the territory will be glad to furnish you with Fargo Brand Seed. If your dealer cannot supply you send your order direct to us.

THE NORTH DAKOTA SEED LAW is one of the most strict of any in the United States. It is a good law and we pride ourselves on doing everything in our power to observe it to the letter. Furthermore, the State Seed Control Laboratories are also located at Fargo and our stocks of seeds are at all times subject to their inspection.

MONEY BACK—We use extreme caution in filling all orders and invite our customers to subject any seed we ship them to the most rigid tests. Should a case arise where a shipment is not entirely as represented you may return it and we will gladly refund your money. **AFTER SEED IS PLANTED OUR LIABILITY CEASES.**

NON WARRANTY—Fargo Seed House gives no warranty express or implied, as to quality, description, productiveness, or any other matter of any seeds they send out, and will not be in any way responsible for the crop.

SAMPLES—We furnish samples of our seed grain and field seeds, free of charge, to prospective buyers on request. When orders are placed from samples please give us approximate date you received the samples; also stock numbers.

PRICES SUBJECT TO CHANGE.—The prices in this catalog are based on market conditions at the time it is issued and are subject to change without notice. We do not alter prices except when it is absolutely necessary. However, if you wish to place an order several weeks after the date of this list just send for a new list which gives current quotations and we will forward it at once.

TERMS OF SALE.—Cash must accompany order and should be in the form of money order or bank draft, or currency by registered mail. We will accept postage stamps on remittances of \$1.00 or less, if you find it more convenient to use this method.

ORDERS PROMPTLY FILLED.—We usually make shipment the same day your order is received. Should some unforeseen delay arise you will be notified by letter telling you the cause of delay and when shipment will be made. When writing to inquire about your order be sure to give us your name and address together with a copy of your order and the date and amount of your remittance.

LAST BUT NOT LEAST—ORDER EARLY.—Our choicest stocks are ready for shipment at this time. Occasionally it happens that a rush of late orders will use up certain items of stock before they can be replaced, causing annoying delays in spite of all we can do and we want to save you this inconvenience.

We want you to feel this is **YOUR** seed house. Whenever we can be of service to you we consider it a privilege. We are always glad to hear from you and to give you any information you may wish regarding varieties of seed and their adaptability to your special conditions.

Make up your seed order today. The last page of this catalog is an order blank and you will find an addressed envelope enclosed for your convenience.

FARGO SEED HOUSE

ESTABLISHED 39 YEARS

FARGO SEED HOUSE

BUY YOUR SEED CORN EARLY

Few people realize the serious situation which confronts corn growers this year. Last year the situation was bad enough, but thanks to the carry-over from the 1923 crop, there was sufficient seed corn to supply all who wanted it. That condition does not exist this year. The old corn fit for seed has been practically all used up and due to extremely cold, wet, freezing weather during late October, very little new crop corn shows a germination high enough for seed purposes. It is safe to say that practically no new corn which was standing out of doors in the field or in cribs during the heavy freezes of October and November will germinate properly now. As a result of these conditions we have found it very difficult to lay in our usual stock of good North Dakota seed corn. In fact our supply is scarcely more than half of normal as we have thrown out all lots which are not up to our standard of high germination.

Each year shows more clearly the need of using strictly North Dakota grown seed corn. We have preached this continually and intend to keep on preaching it. Results count. Don't let some one sell you corn because of its looks. Know first where it was grown. Southern grown corn is bigger and looks nicer than the home grown but next Fall it will still be soft when the other is ripe.

Order your supply of Fargo Brand North Dakota Grown Seed Corn at once and be sure of your supply.

One of our Kilns showing our method of drying N. D. grown corn.

NORTH DAKOTA GROWN CORN

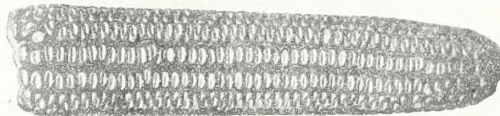

North Dakota White Dent—There is apt to be much confusion between this variety and the larger White Dent variety, known as Rustler White Dent. The distinguishing feature of the North Dakota White Dent, however, is the fact that the ears are somewhat smaller and the kernels not as deeply dented. On account of this latter fact, it is sometimes called a semi-dent. It is an extremely early variety, and grows to a good height and is therefore much in demand. Grown in Cass County. Shelled, per bushel, (jute bags included)..... \$5.50

North Dakota Square Deal—This variety is one of the earliest Yellow Dent varieties which we can offer. It is a splendid corn and though not very tall, the ears grow up high enough on the stalk so that it is easily harvested with a corn binder. Grown in Cass County.

Shelled, per bushel, (jute bags included)..... \$5.50

Northwestern Dent—It is no exaggeration to say that Northwestern Dent is largely responsible for the development of Corn growing in North Dakota. In the early days of Corn raising in this territory it was considered that no other variety of Dent Corn was safe to grow. It was largely true at that time, and while in recent years several other Dent varieties have become well enough acclimated to mature consistently, at the same time the Northwestern Dent still holds favor with a very large number of growers throughout the territory. It is a Red Dent variety, sometimes called a semi-dent, and in addition to being a large yielding early variety, it is very desirable for fodder purposes, as it suckers abundantly and produces a tremendous amount of roughage for livestock when grown for that purpose. Northwestern Dent can still be considered the best Dent variety for North Dakota and its popularity increases after an unfavorable Corn year, such as 1925, on account of its dependability. Grown in Cass County.

Shelled, per bushel, (jute bags included)..... \$6.00

Rustler White Dent—This is the largest variety of White Dent being grown in North Dakota and has found much favor amongst stock raisers as a feed corn. Considering the size, it is a very early corn and in a favorable season will produce a very heavy yield of handsome white cobs considerably larger than other varieties of corn being grown in this territory, bearing from sixteen to twenty rows each. Grown in Richland County.

Shelled, per bushel, (jute bags included)..... \$6.00

Minnesota No. 13—The original strain of Minnesota 13 Corn which was introduced into this territory was a rather large and somewhat late variety. During the long period of years which it has been grown in this State, however, it has gradually become acclimated until now it is almost as early as Northwestern Dent. It is by far the outstanding Yellow Dent variety for this territory, and one which we can recommend most strongly to farmers who wish to produce a Corn somewhat larger in type than the extremely early dwarf varieties. It grows very leafy and produces a medium large cob, having from sixteen to twenty rows of kernels. Grown in Cass County.

Shelled, per bushel, (jute bags included)..... \$6.00

ALL PRICES F.O.B. EITHER FARGO OR MOORHEAD

FARGO SEED HOUSE

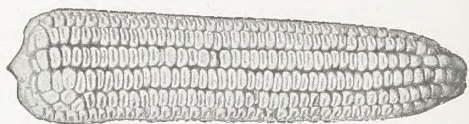

N. D. GROWN CORN (Continued)

Golden Dent—Just as Gehu and Squaw Flint are known as the earliest Flint varieties in the world, so it is perfectly safe to say that Golden Dent is the earliest Dent variety in the world. Even this year when most of the corn in this territory showed a moisture content of from 25 to 30 percent the 1st of November, this variety was ripe enough and dry enough to thresh out with an ordinary threshing machine. The name is quite descriptive of the appearance, as the color is a bright golden, in fact, almost an orange color. The ears are small, but because of the fact that the cob is much smaller than is usual with an early variety, it shells out more pounds of shelled corn per bushel of ear corn than any variety that is grown in this territory. The small cob is also responsible to a large extent for the fact that it dries out so thoroughly every year. For anyone who wishes to grow Corn for threshing, we would strongly recommend the use of this variety, as it is a very good yielder and will ordinarily grade higher on the market than the other varieties which contain more moisture at harvest time. Grown in Cass County.

Shelled, per bushel, (jute bags included)..... \$6.00

Minnesota No. 23—The Minnesota Experiment Station were the breeders of this variety of Corn and first put it on the market several years ago. It is a Yellow Dent variety with a white cap and is usually known as an 85 day Corn. It has gained much favor in northwestern Minnesota and in certain sections of North Dakota. The size of the ear is about the same as the North Dakota White Dent and will mature in about the same length of time. For those who wish a Corn about half way between Northwestern Dent and Minnesota 13, we would strongly recommend the use of this variety. Grown in Cass County.

Shelled, per bushel, (jute bags included)..... \$6.00

Gehu Flint—As a "hogging off" corn, this variety leaves nothing to be desired. It is generally considered the earliest of any corn that can be raised. It is a bright yellow color and the ears develop quite low on the stalks so that when the hogs are turned into the fields, it is easy for them to reach the ears. Although the stalks are short and the cobs are small, nevertheless, it suckers a great deal, and is on this account a heavy yielder. Will mature in about seventy days. Grown in Cass County.

Shelled, per bushel, (jute bags included)..... \$5.75

Mixed Dent—In handling North Dakota Grown Corn in our kilns, which have a slatted floor, there is always a certain percentage of Corn which shells off and becomes mixed underneath the floor of the drier. It shows a high germination and is splendid North Dakota grown Corn, and although it is a mixture of the different varieties which we have been handling during the season, it produces a fine feed crop for anyone who is not particular about raising a corn of a straight variety but wants a corn which will be sure to mature.

Shelled, per bushel, (jute bags included)..... \$3.50

N. D. GROWN CORN (Continued)

White Squaw Flint—The characteristics of this variety are almost identical with the Gehu Flint, except that the kernels are pearly white instead of yellow. It is a low growing variety with ears rather close to the ground and makes a splendid corn for "Hogging off." It suckers to a marked degree, and is a splendid yielder. This variety should not be confused with what is sometimes called North Dakota White Flint, as it is very much earlier. Grown in Cass County.

Shelled, per bushel, (jute bags included)..... \$5.50

Rainbow Flint—This is one of the most useful of the Flint varieties. It is early, maturing at about the same time as the Rustler White Dent and is a very good yielder. This variety was obtained from the old original Indian Corn, and hence the ears are a mixture of Red, Blue, White and Yellow in various combinations. It is taller than the Squaw Corn however, and is very easily cut with a binder. We can recommend this variety very highly to those of our customers who are interested in growing a feed crop, as well as raising a crop of mature corn. Grown in Richland County

Shelled, per bushel, (jute bags included)..... \$5.75

Mercer Flint—One of the most popular varieties with stock raisers as it grows to a good height and produces an abundance of excellent Fodder. The plant suckers considerably and is very leafy. It is also the most popular of the tall Flint varieties as it matures very nicely in a favorable season, producing a heavy yield of beautiful yellow ears, bearing from eight to ten rows of kernels. Grown in Cass County.

Shelled, per bushel, (jute bags included)..... \$6.00

MINNESOTA GROWN CORN

Rustler White Dent—One of the most favorably known White Dent Corns available. It has gained great favor in many sections of North Dakota because of its ability to produce large yields in favorable years, and also the fact that it produces a very heavy yield of excellent fodder, even when it does not thoroughly mature. This is one of the safest varieties for a farmer to use who wishes to work into a larger type of Corn than the types afforded by North Dakota grown varieties. Grown in Lyon County.

Shelled, per bushel, (jute bags included)..... \$5.75

JUTE BAGS INCLUDED WITH SEED CORN WITHOUT CHARGE

FARGO SEED HOUSE

MINNESOTA GROWN CORN (Continued)

Minnesota No. 13—The original stock of this Corn was obtained at the Minnesota Experiment Station and is of the same parentage as the North Dakota grown Minnesota 13 which we offer except that this corn has been grown continuously in the central part of Minnesota. Consequently it has not been thoroughly acclimated to North Dakota climatic conditions, but in most years will get thoroughly ripe in North Dakota and is an excellent yielder. Even when it does not get ripe it produces a tremendous amount of feed on account of its large size. Grown in Yellow Medicine County.

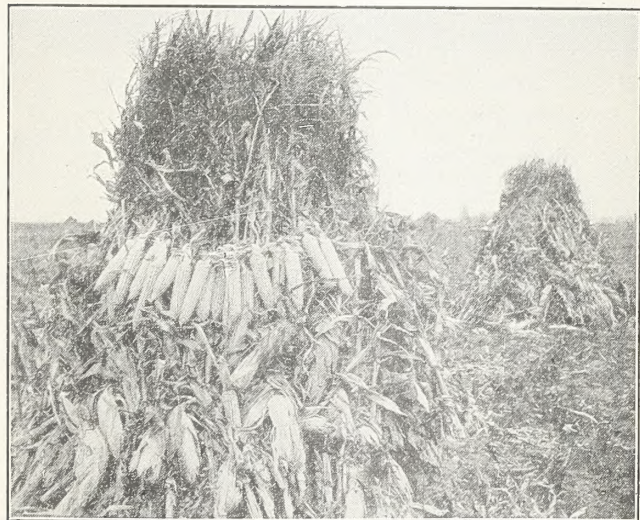

Notice the roots of this vigorous Minnesota No. 13

Shelled, per bushel, (jute bags included).....\$5.75

Northwestern Dent—This corn is the same in characteristics as our North Dakota grown Northwestern Dent, as it is the same variety but being grown in the central half of Minnesota, is somewhat later and grows somewhat larger. We recommend it very highly for those who want a larger type of corn than the N. D. grown seed produces. As a corn for silage purposes, we could not recommend any variety to be more satisfactory than this. Grown in Lyon County.

Shelled, per bushel, (jute bags included).....\$5.75

Northwestern Dent

Popcorn, Japanese Hullless—A variety which is rapidly replacing other varieties of popcorn for commercial purposes. It produces a very short stubby ear but the kernels are slender

and deep, having a very thin hull and when popping will produce from 25 to 40 percent more bulk than other varieties which have been used in the past. The demand for this variety has become so insistent that we have discontinued handling any other. To any one wishing to grow popcorn commercially, we would strongly recommend the use of this variety in preference to any other, as it is much more salable.

Shelled, per bushel, (jute bags included)..... \$6.00

FODDER CORN

With the advent of livestock on farms in this territory, the use of Fodder Corn is becoming more popular for several reasons. In the first place, it can be sown late in the season after other forage crops may have proved to be a failure. Furthermore, it will produce more tons of feed per acre than any other grain or grass when drilled at the rate of about one-half bushel per acre. It also makes an ideal silage corn when cut before touched by frost, altho it is equally nutritive in food value when fed in bundles. It is an ideal feed for all classes of livestock and we cannot urge our customers too strongly to plant part of their acreage to fodder corn during the coming season.

A field of Mammoth Yellow Dent Fodder Corn being harvested.
A few acres of such corn produces a tremendous amount of feed.

Mammoth Yellow Dent Fodder—A very popular variety which is growing in favor on account of having a slender stalk with an abundance of leaves. In a favorable season this corn will produce a large amount of well formed ears which add to its value as a feed.

Shelled, per bushel, (jute bags included)..... \$2.25

Mammoth White Dent Fodder—Quite similar in characteristics to the Yellow Fodder Corn and of equal value. It is a tall growing variety, very leafy and makes a splendid feed as either silage or Fodder.

Shelled, per bushel, (jute bags included)..... \$2.25

Red Cob White Dent Fodder—An excellent variety of Southern Grown Fodder Corn, making large growth and heavy yield.

Shelled, per bushel, (jute bags included)..... \$2.50

Sweet Fodder Corn—Many stock raisers, especially dairy men, favor Sweet Corn as Fodder, since it is very palatable to cattle and is quite inducive to an increased milk flow.

Shelled, per bushel of 45 lbs. (jute bags included)..... \$4.00

ALL PRICES F.O.B. EITHER FARGO OR MOORHEAD

FARGO SEED HOUSE

FORAGE CROPS

Heads of Sorghum

Sorghum (Amber Sugar Cane)—Makes one of the very best crops of Fodder when drilled at the rate of 15 pounds per acre. It produces a sweet tender Fodder which is of high food value for cattle, horses or hogs, either as roughage or silage. Every north western farmer should grow some Sorghum, as it is a great drought resistant plant and sure to provide a heavy tonnage of choice feed even with a deficient rainfall. It succeeds better when planted late, as early planting is apt to stunt it.

Per 100 lbs..... \$3.75

Sorghum—Minnesota grown, an extra early variety desirable either for fodder or making syrup.

Per 100 lbs..... \$4.50

Sunflower, Mammoth Russian, North Dakota grown—The use of Sunflower for silage in this territory is increasing from year to year. In addition to its value for silage purposes, it makes a splendid ingredient for any poultry ration, as the grain is very rich in both oil and protein.

Per 100 lbs..... \$7.00

Sudan makes a very dense growth

Sudan Grass—The name of this plant is somewhat misleading as it really belongs to the Sorghum family instead of being a grass, the proper name being Andropogon Sorghum. It re-

FORAGE CROPS (Continued)

sembles the Sorghum family in habit of growth, reaching a height of 6 to 8 feet and produces a tremendous tonnage of feed per acre. It should be sown at the rate of from 4 to 6 pounds per acre in rows 18 to 24 inches apart, or drilled at the rate of 15 pounds per acre. It is one of the best drought resisting forage crops introduced into this territory in recent years and can be harvested with either a mower or binder two or three times in a season.

Per 100 lbs..... \$7.00

Kaffir Corn—This is one of our best forage and hay plants, and is always in good demand in areas where the rainfall is sometimes deficient. It is easily grown and makes one of the best fodders for horses and cattle when it is cut just as it starts to tassel. The grain is also a valuable addition to mixed poultry feeds, as it is very high in food value. Should be drilled in rows at the rate of 30 pounds per acre.

Per 100 lbs..... \$3.75

A Few Acres of Rape make an excellent Hog Pasture

Dwarf Essex Rape—We do not know of any plant that makes a better hog feed than Rape. It may be sown any time from early Spring until late Summer, either alone or with some other crop. When sown by itself, from 5 to 10 pounds per acre, it produces a splendid stand that will provide an abundance of feed for hogs during the Summer. When used in a mixture with other grains, less of the Rape is required and it provides a valuable addition to the nutritive value of the grains with which it is grown. In food value it is nearly twice that of Clover, and should be grown by every farmer who is raising hogs.

Per 100 lbs..... \$9.00

Hog Pasture Mixture—In preparing this mixture, we have followed the formula provided by the Government Experiment Station, which has been scientifically prepared with the idea of providing a perfectly balanced ration for hogs from the standpoint of nutrition. For best results it should be sown at the rate of 100 pounds per acre.

Per 100 lbs..... \$6.00

FIELD PEAS

Chang Field Peas—On the recommendation of Dr. Walster, Agronomist of the North Dakota Agricultural College, we purchased a supply of this variety to be grown on contract for us during the 1925 season. The results were most satisfactory, and

SEAMLESS BAGS EXTRA 50 CENTS EACH, JUTE BAGS EXTRA 25 CENTS EACH

FARGO SEED HOUSE

FIELD PEAS (Continued)

we have a fair stock of this new variety to offer to our customers. In tests which have been made at the Agricultural College, the Chang Peas have given splendid results and we do not hesitate to recommend them as the variety best adapted to North Dakota and Northwestern Minnesota conditions. They are very early, heavy yielding, and free from disease. If you have not been raising Field Peas before, we would strongly recommend that you get started with this new variety.

Per 100 lbs. \$6.50

Canada Field Peas—This is a variety of Field Peas which has been grown in the Northwest almost exclusively for some years. It has proved a very profitable crop for many of our farmers, and in addition to making an excellent feed for horses, sheep, hogs and milch cows, it is one of the best legumes for returning nitrogen to the soil thru the nitrogen gathering nodules on the roots. The Peas can be sown either alone or with Oats or Barley, as a nurse crop, and will do well on almost any soil.

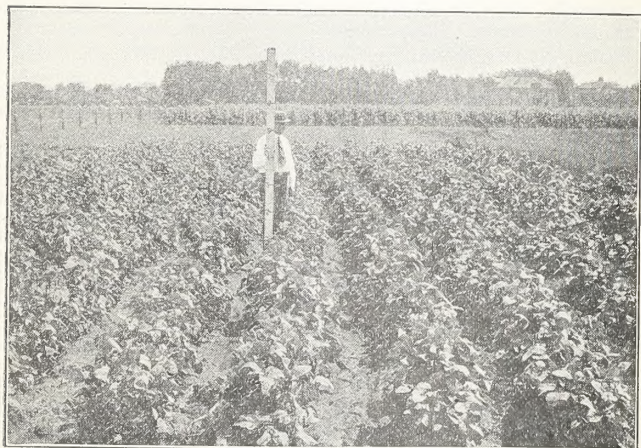

Per 100 lbs. \$5.50

Golden Vine Field Peas—Quite similar to Canada Peas in appearance and characteristics, but preferred by many experienced pea raisers because they are earlier and a better yielder. Our stock was raised by one of the best field pea growers in the Northwest assuring both trueness to type and high quality. Don't overlook this splendid variety.

Per 100 lbs. \$6.00

SOY BEANS

This wonderful crop is now on a firm footing in the Northwest because of the development of three distinct varieties which are thoroughly acclimated to Northern soil and weather conditions. By means of having our supply of these varieties grown for us on contract we have been able to maintain a stock available for 1926 demands. Start now growing this wonderful crop if you haven't already. They are the greatest soil enricher we have and an unexcelled hog feed. Seed in rows from 30 to 42 inches apart when grown alone or plant with corn for hogging down at the rate of two parts of corn to one part of Soy Beans mixed in hopper of corn planter.

Soy Beans at N. D. Agricultural College

SOY BEANS (Continued)

Minsoy Soy Beans—In a series of trials carried on at the North Dakota Agricultural College this variety proved to be the earliest Soy Bean available every year with the exception of 1924. The peculiar weather conditions during that season, seemed to alter some of the characteristics of this variety so that they matured at the same time instead of ahead of the Wisconsin Black variety. It seems safe to state as a result of these trials that in a normal season this variety will mature before any other variety which is now available. The plant has a somewhat shorter growth than the other varieties, but is desirable because of its upright habit and the fact that the plants are abundantly loaded with seed pods. The kernel is a clear yellow color like some of the later varieties and has a brown eye. It is desirable for its color because of the fact that hogs when feeding on the crop in the field can see the yellow kernels more readily than is the case with some of the darker colored varieties. When you start growing Soy Beans, we strongly recommend that you obtain a supply of the Minsoy, as this is only the second year that they have been available on a commercial scale, having been developed at the Minnesota Experiment Station just a few years ago. Should be seeded at the rate of 35 pounds per acre.

Per 100 lbs. \$7.00

Wisconsin Black Soy Beans—This variety was the first to be grown successfully in North Dakota. It grows somewhat larger than the Minsoy and the kernel is also larger, being a jet black without any marking. In 1924 the Wisconsin Black matured at practically the same date as the Minsoy, but in an average year is a few days later. Even so, it is plenty early enough to mature without any difficulty in this latitude and on account of its somewhat larger growth and better yield, it is desired by a great many farmers.

Per 100 lbs. \$6.50

Mandarin Soy Beans—Recommended by the North Dakota Agricultural College as one of the group of three varieties of Soy Beans which are thoroughly adapted to North Dakota soil and climatic conditions. It is slightly later than the Minsoy and Wisconsin Black varieties, but is considerably earlier than the larger later varieties which are grown thru the central states, such as Ito Sans, Black Eyebrow, Chestnuts, etc. It is especially desirable for hogging off because the seed has a bright yellow color without any marking and when shattering off and falling to the ground is easily seen and picked up by the hogs. It grows somewhat larger than either the Wisconsin Black or the Minsoy, and the kernels are slightly larger also. We recommend this variety very highly for hogging off.

Per 100 lbs. \$6.00

Navy Beans—Choice hand picked North Dakota and Minnesota grown stock. Always in demand and a good money maker.

Per bushel of 60 lbs. \$4.00

Great Northern Beans—A large white variety excellent for baking and in good demand.

Per bushel of 60 lbs. \$4.00

MILLET

Millets of all varieties should be sown in North Dakota after June 1st, for best results.

Hungarian Millet—Is somewhat earlier in maturity than German Millet, and seems to require less moisture; hay of excellent quality and high feeding value.

Per 100 lbs. \$4.50

ALL PRICES F.O.B. EITHER FARGO OR MOORHEAD

FARGO SEED HOUSE

MILLET (Continued)

Siberian Millet, Southern Crown—Has the same general characteristics as the Northern Siberian except that it grows much taller, yielding a heavier tonnage of hay per acre. Choice heavy seed of best quality.

Per 100 lbs..... \$4.25

Siberian Millet, Northern Crown—Our earliest maturing variety, extremely hardy, withstanding drought to a marked degree. Stools freely thus making hay of very choice quality which is high in food value as cattle feed.

Per 100 lbs..... \$3.50

German Millet, Southern Crown—As most of the Northwestern millet acreage is for hay purposes we offer this Southern grown seed which grows much taller than home grown seed, thus producing a heavier, finer hay which makes the best of feed for dairy cows. On good rich soil this variety grows from four to five feet high and produces about five tons per acre.

Per 100 lbs..... \$4.50

German Millet, Northern Crown—One of the best varieties for hay making. An excellent cattle feed when cut just as it reaches full bloom. On rich soil will produce about four tons of hay per acre. Many localities in the Northwest had a very small millet crop the past season and supplies are limited though quality choice.

Per 100 lbs..... \$3.50

White Wonder Millet, Southern Crown—A new early variety with heavy foliage producing a large amount of very fine quality hay.

Per 100 lbs..... \$4.50

Japanese Millet—Grows very rank and produces an immense yield of coarse hay that is much relished by all kinds of livestock. Claimed by many feeders to be even superior to fodder corn as a roughage. Makes the best hay of any millet for dairy herds.

Per 100 lbs..... \$4.50

Hog Millet, Northern Crown—Seed which yields enormous-ly as a grain crop. Popular in districts where corn cannot be

MILLET (Continued)

matured, as this seed is of high value in the fattening of swine, cattle and poultry. Makes good hay when cut very young. Choice, first quality seed.

Per 100 lbs..... \$3.25

Early Fortune Millet, Northern Crown—A variety which is growing in popularity here in the Northwest as it matures in about 70 days. Is a most attractive seed, being a beautiful red and about twice the size of German Millet. It produces a large yield of both seed and fodder and may be fed to both horses and cattle without injury, even when cut after the seed has matured. We offer North Dakota grown seed which has been thoroughly re-cleaned and of highest quality.

Per 100 lbs..... \$3.25

Tambov Proso—A new, very early maturing large red millet. It consistently outyields Early Fortune and has matured in North Dakota in 56 days. Will yield from 30 to 40 bushels per acre.

Per 100 lbs..... \$3.50

SEED WHEAT

Burbank Quality Wheat—A new variety introduced by Luther Burbank which has given remarkable results for the past three years. It is a hard white spring wheat of splendid milling quality and earlier than any other variety now on the market. In fact many farmers who raised it last year cut it at the same time they cut their barley. The head is beardless, and the straw unusually stiff and strong. It is a tremendous yielder and a variety which every farmer should get started with immediately. Don't wait any longer. Be sure to plant some Quality this year. It will pay you well in dollars and cents.

Per bu. (Jute Bags Extra 25c)..... \$2.85

Ruby Wheat—For the past six years we have been handling this variety of Wheat, and each year the demand for it has been increasing steadily. This is because of the fact that it is a very early variety, fully ten days ahead of Marquis which gives it an opportunity to mature before being damaged by rust or unfavorable weather conditions. It is a hard Spring Wheat of excellent milling quality, produced by Dr. C. E. Saunders, Ottawa, Canada, by crossing Downy Riga and Red Fife Wheats. It is a beardless wheat with a short stiff straw and on this account is especially adapted to rich land, such as potato ground, corn ground or Sweet Clover sod.

Per bu. N. D. Grown (Jute Bags Extra 25c)..... \$2.20

Marquis Wheat—Only about ten years ago this variety was comparatively new in North Dakota, having been imported from Canada, but in the short space of time that has elapsed since then, it has completely replaced all of the varieties of hard Spring wheat which then were being grown, such as Blue Stem, Velvet Chaff, Fife, etc. Without doubt it is one of the two best yielding hard Spring Wheats ever brought into this country and in a year which is favorable to the production of a wheat crop, it is one of the best varieties obtainable. To the wheat grower Marquis is indispensable, and we believe that every grower of hard Spring Wheat should seed part of his acreage to Marquis Wheat, and part of it to other varieties. In this way, as the old saying goes, "he will not have all of his eggs in one basket."

Per bu. (Jute Bags Extra 25c)..... \$2.20

Canadian Registered Marquis—This is the best, purest Marquis obtainable. Grown in Saskatchewan and registered by the Canadian Seed Growers Association. In sealed jute bags.

Per bu. (2-bu. jute bags extra 25 cents each)..... \$2.65

SEAMLESS BAGS EXTRA 50 CENTS EACH EXCEPT WHERE NOTED.

FARGO SEED HOUSE

SEED WHEAT (Continued)

Kota Wheat

Kota Wheat—A bearded variety of hard Red Spring Wheat belonging to the Preston group which came originally from Russia. It was brought to the North Dakota Agricultural College in 1903, but the original stock was lost. In 1911 it was first observed as an admixture in a plot of Wheat at the Agricultural College, and in tests made during recent years it has been found unusually resistant to black rust.

A variety which undoubtedly has come to stay.

Per bu. (Jute Bags 25c).....\$2.20

Kubanka Amber Durum—One of the best varieties of Durum for northwestern localities. It produces a crop of fine quality grain which brings the top of the market according to grade. The straw is strong and heavy, being fairly resistant to the attacks of Black Stem Rust.

Per bu. (Jute Bags Extra 25c).....\$2.00

D-1 Durum—A heavy yielding Durum variety which was introduced with two objects in view. First, to be resistant to rust and, secondly, to grade Amber when sold on the market. It has accomplished these two objectives very satisfactorily, and is a splendid variety which we can highly recommend.

Per bu. (Jute Bags Extra 25c).....\$2.00

Mindum Durum—In their efforts to produce an Amber Durum Wheat which would be resistant to Black Stem Rust, the Minnesota Experiment Station have developed this variety. It is a heavy yielder and will grade very well on the market, being of a good Amber color.

Per bu. (Jute Bags extra 25c).....\$2.00

Acme Durum—At about the same time the North Dakota Experiment Station developed the D-1 Durum, the South Dakota Experiment Station at Brookings introduced a variety almost identical with D-1 in appearance and characteristics, which they named Acme Durum. It is a very desirable variety for any locality which is especially adapted to the production of Durum Wheat, as it is a big yielder and remarkably drought resistant. The kernels are large and plump and are of a fine amber color so that it grades well on the market.

Per bu. (Jute bags extra 25c).....\$2.00

SEED OATS

Hulless Oats—This variety of Oats, sometimes known as Liberty Hulless Oats, is rapidly growing in favor all over the Northwest. Until last year the price of this variety was so high that we hesitated to offer it to our customers but production is now on a large enough basis so that we are able to offer a

SEED OATS (Continued)

moderate supply at a reasonable price. The seed we are offering has been grown for us largely on contract, and we do not hesitate to urge our customers to try at least a few acres of this new variety this year. It is very economical feed since the kernels have no hull on them, thereby doing away with the waste incurred by the hulls which usually amounts to about one-third of the total weight. It grows about three feet high and has splendid feed qualities, making an excellent feed for horses when mixed with a portion of bran. It also makes an ideal chicken feed whether used alone or mixed with other grains, and is likewise an excellent hog feed.

Per 100 lbs. (Jute bags extra 25c).....\$4.00

60-Day Oats—One of the earliest varieties we have been able to produce, maturing in July, thus admitting of harvest before wild oats and other noxious weeds ripen. Outstanding as a heavy yielding variety. Does not lodge on rich land. Sow early for best results.

Per bushel (Jute bags extra (25c).....\$.65

Swedish Select Oats—A very popular early variety, heavy yielder even on light soils. Large branching heads filled with bright, plump grain. Stiff coarse straw and seldom lodges.

Per bushel (Jute bags extra 25c).....\$.60

Victory Oats—Since its introduction a few years ago, this has been one of the favorite varieties among the largekerneled types. Beautiful plump, heavy kernels and a fine yielder.

Per bushel (Jute bags extra 25c).....\$.65

White Russian Oats—For over forty years this variety has been almost a standard in North Dakota. It is a side Oat, or sometimes called "Horse's Mane Oat," because all of the panicles hang on one side of the stem. It is somewhat later than some of the earlier branching varieties but on account of its dependability, very easily maintains its popularity, as it is an exceptionally large yielder.

Per bushel (Jute bags extra 25c).....\$.60

Big Four Oats—A heavy yielding Oat of the branching type which produces splendid yields even on light soil. It has a comparatively short stiff straw which will withstand all ordinary storms, and is a splendid variety which we can recommend without hesitation.

Per bushel (Jute bags extra 25c).....\$.60

Iowar Oats—A truly wonderful variety, bred up and introduced recently by the Iowa Agricultural College. It is really an improvement of the old Kherson oats, retaining all of the early maturing characteristics of its parents with the added features of being a much heavier yielder and a distinctly finer quality. The stock which we offer was grown by a farmer in Cass County who obtained a yield of 104 bushels per acre with them last Fall. An extremely early variety and a tremendous yielder. Get some this year.

Per bushel (Jute bags extra 25c).....\$.90

Gopher Oats—An introduction by the Minnesota Experiment Station. This is the first year they have been available in commercial quantities. They are sure to become one of the most popular varieties in the Northwest because they mature almost as early as the 60-day oats and are a very heavy yielder. They are a branching variety with an unusually stiff straw.

Per bushel (Jute bags extra 25c).....\$.80

ALL PRICES F.O.B. EITHER FARGO OR MOORHEAD

FARGO SEED HOUSE

SEED OATS (Continued)

Canadian Abundance Oats—The Lloydminster district of Saskatchewan is famous the world over for its magnificent oats. The Abundance to a large extent is responsible for this fame. Among the large plumpkerneled varieties it has no superior. It is early, a big yielder and the kernels very large and plump, being half again as large as the average variety, resulting in a very heavy weight per bushel. One of the most famous varieties from a world famous oats district.

Per bushel (Jute bags extra 25c).....\$.65

Silver Mine Oats—Another standard variety of branching Oats which is very popular on account of its early maturity. It very seldom lodges on account of its stiff straw, and year in and year out is considered one of the best yielding varieties for this territory.

Per bushel (Jute bags extra 25c).....\$.60

SEED BARLEY

Black Barbless Barley—A welcome new variety for barley raisers. It is neither beardless nor hullless, but the beards have no barbs on them. Does away with sore hands and other unpleasant features of harvesting barley. Similar in appearance to common six row barley except that kernels are blue-black in color. A heavy yielder and an excellent feed crop.

Per bushel (Jute bags extra 25c).....\$1.10

Two Row Barley—The choice of many growers because of unusual size and quality, the kernels being nearly half again as large as six row barley. On this account it always commands top market price. A fine yielder.

Per bushel (Jute bags extra 25c).....\$1.00

Beardless Barley—An ideal variety to eliminate the hardships connected with shocking and handling a crop of barley. The heads have no beards on them, but in all other respects resemble other six rowed varieties. We can confidently recommend this variety.

Per bushel (Jute bags extra 25c).....\$1.10

Oderbrucker Barley—One of the favorite bearded six-row varieties which is pronounced in quality and yield with a heavy plump kernel excelling in feed value. In stiffness of straw and rust resistance it is superior to other varieties. The outlook at the time this catalog goes to press indicates a very heavy demand for Seed Barley during the Spring months on account of the large amount of Spring plowing which must be taken care of this year. To those of our customers who are interested in purchasing Seed Barley we would strongly recommend that they place their orders early before our stocks of this Barley are exhausted.

Per bushel (Jute bags extra 25c).....\$.90

White Hullless Barley—From a feed standpoint the White Hullless is of practically the same value as the Blue Hullless but is sometimes preferred by growers on account of the fact that it is almost beardless. It will usually weigh 60 pounds per measured bushel and is a splendid yielder. It is practically equal to Corn for feed value for fattening hogs and other livestock.

Per bushel of 48 pounds (Jute bags extra 25c).....\$1.10

Manshury Barley—Early in maturity and vigorous of growth, it yields an abundance of plump best quality grain. Straw is stiff and strong and has but seldom been known to lodge.

Per bushel (Jute bags extra 25c).....\$.80

SEED SPELTZ

Speltz—Farmers in the Northwest cannot afford to be without it. It produces a good yield under adverse conditions, even

SEED SPELTZ (Continued)

where other crops often fail. It will stand more dry weather than any other grain crop as it is a good drought resister. It produces more food value per acre than any other of our grains and is a most valuable feed for all kinds of stock. The plant is almost entirely free from rust and smut and does not lodge.

Per bushel of 40 lbs. (Jute bags extra 25c).....\$.75

SEED FLAX

North Dakota Resistant No. 52, Flax—This variety was bred up by Prof. H. L. Bolley of the N. D. Experiment Station for a wilt resistant variety. He commenced work on it in 1900 and first put the seed in the farmers' hands, in small quantities, in 1908. A splendid variety for land on which flax has been grown before.

Per bushel (Seamless bags extra 50c).....\$3.50

Linota Flax—The latest development of the Agronomy department of the N. D. Agricultural College. It is highly wilt resistant and in many cases is a better yielder than other wilt resistant strains. We secured only a few bushels last spring which we had grown for us on contract and our supplies are very limited as this is the first year it has been offered commercially.

Per bushel (Seamless bags extra 50c).....\$5.00

Russian Flax—The choicest of seed which has been grown on breaking, perfectly hardy for sowing any place in the Northwest, as it readily adapts itself to all soil conditions. Grow it on land which has not been recently planted to flax and be assured of a good yield. Has larger berry than the wilt resistant varieties and is frequently a better yielder.

Per bushel (Seamless bags extra 50c).....\$3.25

North Dakota Resistant No. 114 Flax—The test of the wilt resistance of any lot of Flax is of course whether or not it wilts on wilt sick ground. This variety was bred up by Prof. Bolley of the Agricultural College by selecting seed from those plants which did not wilt on land known to be infested with the wilt disease. North Dakota Resistant No. 114 is the latest variety which he worked on and which is now commercially available, and we have been very careful in purchasing our supplies to see that they are traceable directly back to his original introduction. It is difficult to obtain a supply on which we can obtain a satisfactory history, so naturally our stocks are limited, and we would urge anyone who desires to obtain some of this variety to place his order early.

Per bushel (Seamless bags extra 50c).....\$3.50

SEED RYE

Spring Rye—A Rye crop is usually one of the most profitable crops in this part of the country. When weather conditions make it impossible to seed a normal acreage of Winter Rye in the Fall, an added acreage may be seeded in the Spring with Spring Rye which will mature at almost the same time as the Winter Rye. It should be seeded as early as possible and at the rate of about 1½ bushels per acre. Our stock of seed comes from reliable growers who have been raising Spring Rye for a number of years.

Per bushel.....Ask for Price

SEED BUCKWHEAT

Buckwheat—As a catch crop, it has no equal, as it can be seeded even as late as the early part of July. It is almost always a good cash crop as it matures very quickly and produces a large yield of grain. It is also a splendid fertilizer to be turned under when green. Buckwheat grows very dense, almost completely shading the ground and is often recommended for use on weed infested land to smother out the weeds.

Per 100 lbs. (Jute bags extra 25c).....\$2.75

SEAMLESS BAGS EXTRA 50 CENTS EACH—JUTE BAGS EXTRA 25 CENTS EACH.

Lawn Grass Mixture—Our Fargo Brand Mixture contains the choicest varieties which are particularly adapted to our Northern climatic conditions. Per 100 lbs. (Seamless bags extra 50c).....\$35.00

CLOVER

Alsike Clover—One of our hardiest varieties which does well even on low moist land and withstands pasturage better than the Red Clovers. Minnesota grown. Per 100 lbs. (Seamless bags extra 50c).....\$28.50

White Dutch Clover—A low growing variety which will stand very close cutting and pasturage. Much used as a mixture with other permanent grasses.
1 lb.....\$.60 10 lbs.....\$5.00 100 lbs.....\$45.00

Bromus Inermis—The great drought and frost resisting grass for both hay and pasture. It starts in the spring two weeks earlier than the native prairie grasses and is still green in the fall after all other varieties are dead. Choice seed which we recommend as quack free. Per 100 lbs., sacked..... \$8.50

Slender Wheat Grass—(Often called Western Rye Grass.) Affords excellent pasture and provides large quantities of hay. Will thrive under very dry conditions on light soil. Also thrives on alkali soil where other grasses fail. Per 100 lbs., sacked.... \$6.00

CLOVER (Continued)

Medium Red Clover

Medium Red Clover—This is a choice hardy lot of heavy bright colored clover grown in North Dakota. The clover crop in the United States was so short in 1925, it seems there will not be enough to go around. Buy your seed early. Bags extra. Per 100 lbs.....\$34.00

Mammoth Red Clover—Of high value for both hay and pasture. Produces well on light sandy soil. Minnesota grown seed. Bags extra. Per 100 lbs.....\$35.00

SWEET CLOVER

Sweet Clover—(White Flowering Biennial.) A valuable plant for both hay and pasture; also of high value as soiling crop. At present prices no farmer can afford not to plant a few acres every year. It is the greatest soil builder which can be grown in this territory and thrives well on every kind of land under any conditions.

Per 100 lbs., Scarified (Seamless bags extra 50c).....\$8.50

Per 100 lbs., Scarified, Extra Fancy (Seamless bags extra 50c).....\$9.00

Per 100 lbs., Scarified, Second Grade (Seamless bags extra 50c).....\$6.50

Sweet Clover—(Yellow Flowering Biennial.) Preferred by some stock raisers because it grows a somewhat finer hay than the white flowering variety. Blossoms about 10 days earlier. Per 100 lbs., Scarified (Seamless bags extra 50c).....\$10.00

White Sweet Clover makes fine bee pasture

Dwarf Crystal White or Grundy County Sweet Clover—Low growing, early. Blooming before the taller varieties, it prolongs the Bee-pasturing season.

Per 100 lbs. (Seamless bags extra 50c).....\$10.00

NORTHERN GROWN ALFALFA

Alfalfa is rapidly becoming a necessary crop to every Northern farmer, and the production of seed here in the Northwest is increasing annually. It is recognized by all authorities that this Northern grown stock is preferable to that grown in the South Central States or in Europe.

Alfalfa, North Dakota Grown—Raised in Cass County on some of the oldest fields in the State. Choice bold seed which is very hardy.

Per 100 lbs. (Seamless bags extra 50c).....\$24.00

Alfalfa, Montana Grown—Produced on non-irrigated land and from some of the oldest and best established fields in the State. This is hardy, vigorous seed which was produced under drought conditions. High in purity, and stock which we can recommend to our trade as having been grown on non-irrigated fields.

Per 100 lbs. (Seamless bags 50c extra).....\$24.00

Alfalfa, Montana Grown—Second grade.

Per 100 lbs. (Seamless bags extra 50c).....\$15.00

ALFALFA, GRIMM, NORTHERN GROWN

This variety is characterized by spreading roots instead of one main tap root and has a much wider crown than other varieties. The blossoms are variegated in color and so are distinguishable from alfalfa which is not Grimm. Considered by a large majority of Growers to be the best and hardiest Alfalfa for the Northwest.

There is much confusion regarding terms used in connection with Grimm Alfalfa which we will try to clear up with the following explanation.

Our **Registered Grimm Alfalfa** is put up in fifty and one hundred pound bags officially sealed and each bag bearing the official tags of either a State Grimm Alfalfa Growers Association or the State Seed Commissioner. Each lot is kept separate retaining its original identity and fields planted with this seed are eligible to registration.

Our **Montana Certified** or **N. D. Affidavit Grimm Alfalfa** comes from fields which are not registered. In many cases these fields have been planted either with registered Grimm or with seed traceable back to the original Grimm field in Carver County, Minnesota, but the owners have failed to have their fields officially registered and the seed cannot be sold as registered seed. Fields planted with this seed are not eligible to registration. In buying this seed we require each grower to furnish us with an affidavit tracing the history of his seed back to a reliable source. These lots are frequently bulked and cleaned together and in selling the seed we seal the bags and furnish the buyer with our affidavit that the seed is genuine Grimm and backed up by the growers affidavits in our files.

--------------	--------

Chicken Waterer—Made entirely of galvanized iron. Built to meet the requirements of every poultry raiser. Sanitary water is a disease preventative and when provided at the right temperature is assurance that the hens will lay regularly. The heater is equipped with a galvanized lamp with large burner and a smokeless chimney. The top part without the heater makes an ideal waterer for baby chicks.

Price each complete with heater, 5 gal. size...\$4.50
Price each complete with heater, 10 gal. size... 7.25

O. K. THERMOS-CHICKEN WATERER
This fountain has a capacity of four gallons. Has double insulated wall, is easy to keep clean as the top part can be removed. It will keep your water warm in winter and cool in summer.

Price each.....\$5.50

MOE'S DRY MASH HOPPER.—Made of heavy galvanized iron. This is a hopper of great merit. The wire grid running across the opening prevents the fowls from wasting the feed. The sloping top with cover makes the hopper both rat proof and weather proof. Made in three sizes.

No. 35—width, $8\frac{1}{2}$ in., shipping weight, $4\frac{1}{2}$ lbs.	each	\$1.65
No. 36—width, 12 in., shipping weight, 6 lbs.	each	2.20
No. 37—width, 24 in., shipping weight, 11 lbs.	each	3.10

MOE'S BOTTOM FILL FOUNTAINS.—This is a well designed inexpensive drinking fountain made in two pieces and is filled by merely removing the top cone and placing it on end.

No. 19, 1 qt. size, shipping weight 1 lb.	each	\$.35
No. 20, 2 qt. size, shipping weight $1\frac{1}{2}$ lbs.	each	.45
No. 24, 1 gal. size, shipping weight 2 lbs.	each	.65

MOE'S MAMMOTH DRY MASH HOPPER

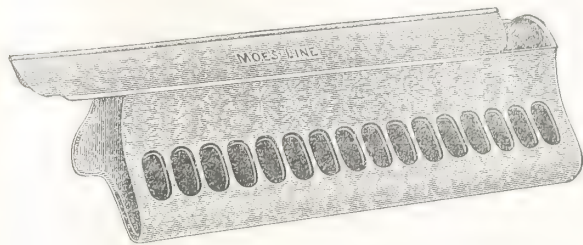

Heavy galvanized iron hopper with a capacity of over 100 lbs. of dry mash. The taper shape and interior construction insure a uniform automatic feed without waste. Complete with angle iron stand and wood perches. Length of hopper 35 in. Total height $3\frac{1}{2}$ in.

No. 3 Hopper and Stand complete, Weight 50 lbs.\$13.50

MOE'S INSULATED DOUBLE WALL FOUNTAIN

Heavy galvanized iron, double walls packed with an efficient insulating material. Large filler opening so is easily kept clean and sanitary. Keeps the water warm in winter and cool in summer. Easy to fill, easy to clean and feeds the water automatically.

No. 8, Capacity 3 Gallon, Weight 16 lbs. each.....\$4.75

MOE'S LARGE CAPACITY FEEDER

A fine feeder for growing stock and a great time and labor saver. Has a total of 32 feeder holes. Sliding top, easy to fill and clean. Capacity 10 quarts, length 21 inches.

No. 140 Moe's Chick Feeder, Weight 4 lbs.\$1.40
No. 141 Moe's Chick Feeder, (Same as above, but larger) 54 feeder holes.	2.00

MOE'S IDEAL POULTRY PUNCH.—An improved scissor type punch which does not pinch the foot. Nickel plated finish, $3\frac{1}{2}$ inch.

No. 39, Ideal Punch	each \$.60
---------------------	-------------

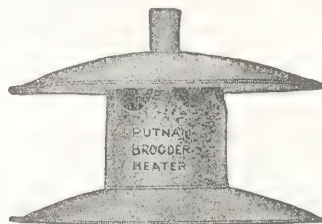

MOE'S EGG CARRIERS.—These carriers are made of corrugated fibre board, and are so strong that they will bear the weight of a full grown man. The ideal box for shipping eggs either by Parcel Post or Express.

No. 14, 15 egg capacity, weight $1\frac{1}{4}$ lbs.	each	\$.20
No. 15, 30 egg capacity, weight $2\frac{1}{2}$ lbs.	each	.40
No. 16, 50 egg capacity, weight 4 lbs.	each	.70
No. 17, 100 egg capacity, weight $7\frac{1}{2}$ lbs.	each	1.25

MOE'S CHINA NEST EGGS.—Made of white porcelain, natural in appearance and uniform in size. Will not easily break.

No. 67, Nest Eggs, weight 2 lbs., per dozen\$.45
---	-------------

LITTLE PUTNAM STOVE.—This stove is nine inches in diameter and four inches high. It is made up of galvanized iron and equipped with a burner which embodies an entirely new principle in oil combustion. The oil tank holds three pints of oil and burns three to four weeks without refilling or any other attention; shipping weight 2 lbs. Each.....\$2.50

PUTNAM BROODER HEATER.—This brooder heater is made entirely of brass and galvanized iron and is practically indestructible. For anyone who wishes to spend only a small amount for a brooder, for a small number of chicks this will answer the purpose very well. Full directions with each stove, "HOW TO MAKE YOUR OWN BROODER," as any kind of a small box can be used without any extra cost.

Shipping weight 5 lbs.

Price.....	\$4.75
------------	--------

CHAMPION DOG BISCUIT—These biscuits, made by the Champion Animal Food Company, are prepared according to scientific formula and are a complete food in themselves. Dogs fed on these biscuits need no other food whatever, and are kept in the best of condition.

5 lb. cartons, each\$.75
50 lb. boxes, each 6.00

FELIX GIRARD RED CROSS RAT AND MOUSE EMBALMER.—This is an excellent preparation for ridding houses, stables, poultry houses, etc., from both mice and rats. It is a very quick acting poison, and should be mixed with fish or chopped meat. It acts as an embalming material on the rodents so that they dry up and leave no odor whatever. Made in three sizes. \$.50—\$1.00 and \$3.00.

BABY CHICKS

97% Live Delivery Guaranteed

We can supply you again this year with the same high quality of Baby Chicks as furnished last season. The chicks which we are offering are from carefully selected eggs from pure bred flocks. You may be able to buy cheaper chicks but be assured that you cannot buy better chicks for less money than we are in position to furnish!

Our prices are delivered to you by Parcel Post. We guarantee a 97% live delivery. Terms are cash with order, or one-third with order and balance three weeks before chicks are shipped. We do not ship chicks C. O. D. The first hatch will be ready for delivery about March first. Place your order early and be assured that you will get your Baby Chicks on time this year.

If you want chicks after May 15, write us for special prices as our price will be considerably less for shipment after that date.

POULTRY FEEDS

FARGO BRAND POULTRY FEED

Under the direction of the poultry Department of the North Dakota Agricultural College we have worked out formulas for our poultry feeds which make them as nearly perfectly balanced feeds as is possible to obtain and the equal or superior of any feeds on the market. Manufacturing these feeds in our own plant here in Fargo effects saving in transportation charges which enables us to quote attractive prices as follows:

FARGO BRAND BUTTERMILK MASH—Best for growing chicks as first feed from third day until four to six weeks old. A completely balanced buttermilk ration.
100 lbs. sacked.....\$4.50 50 lbs. sacked.....\$2.35
25 lbs. sacked.....\$1.25

FARGO BRAND CHICK FEED—An unexcelled starting and growing feed for young chicks. With practically no advertising other than the high quality of the feed itself, our trade on this chick feed has grown until we are now selling over one hundred thousand pounds annually. It is composed entirely of pure, finely cracked grains that are high in food value.
100 lbs. sacked.....\$3.75

FARGO BRAND LAYING MASH—A concentrated feed which will greatly stimulate egg laying at all times. It has a guaranteed analysis showing not less than 19% protein, 4.5% fat, 55.5% carbohydrates and not more than 7% fibre.
100 lbs. sacked.....\$3.50 50 lbs. sacked.....\$1.90
25 lbs. sacked.....\$1.00

FARGO BRAND SCRATCH FEED—An ideal every day feed for grown hens containing wheat, corn, oats, barley, sugar cane, millet and sunflower.
100 lbs. sacked.....\$2.75

FUL-O-PEP POULTRY FEED

This line of feed is manufactured by the Quaker Oats Company of Chicago. They employ the most expert poultry men obtainable. Write for 1926 Ful-O-Pep Poultry Calendar. It is free.

FUL-O-PEP CHICK STARTER—A finely ground mash for use with baby chicks from the very beginning until they are six weeks old.

Per 100 lbs., sacked.....\$5.00
Per 50 lbs., sacked.....2.50
Per 25 lbs., sacked.....1.35

FUL-O-PEP FINE CHICK FEED—Feed this when chicks are from two to eight weeks old.

Per 100 lbs., sacked.....\$3.75
Per 50 lbs., sacked.....2.00

FUL-O-PEP DRY MASH—This mash is unexcelled to stimulate egg production. It combines all the required ingredients to produce the maximum results.

Per 100 lbs., sacked.....\$4.00
Per 50 lbs., sacked.....2.10

FUL-O-PEP SCRATCH GRAIN—Feed this in conjunction with your Dry Mash. Per 100 lbs., sacked.....\$3.25

FUL-O-PEP GROWING MASH—A high protein feed combining in proper proportion all the nourishing qualities required to stimulate rapid growth with baby chicks from the time they are six weeks old until they are ready for market.
Per 100 lbs., sacked.....\$4.25 Per 50 lbs., sacked.....\$2.25
Per 25 lbs., sacked.....1.25 Per 8 1/2 lbs., sacked......60

PURINA POULTRY FEED

PURINA HEN CHOW—This should be fed as scratch grain with Chicken Chowder.

Per 100 lbs., sacked.....\$3.25 Per 50 lbs., sacked.....\$1.75

PURINA CHICK STARTINA—An excellent feed for baby chicks, containing the right amount of Buttermilk and other ingredients.

Per 100 lbs., sacked.....\$5.00 Per 50 lbs., sacked.....\$2.60
Per 8 1/2 lbs., sacked......65

PURINA BABY CHICK CHOW—Feed this with Chicken Startina.

Per 100 lbs., sacked.....\$3.75 50 lbs., sacked.....\$2.00

This feed comes very highly recommended by all leading poultry men. To get the maximum egg production give this feed a trial. When Purina Chicken Chowder is fed in conjunction with Purina Hen Chow and according to direction it is sold on a guarantee basis backed by the manufacturers. Ask for a 1926 Purina Poultry calendar—it is free.

PURINA CHICKEN CHOWDER—This feed is the Purina laying mash which is sure to produce satisfactory results.

Per 100 lbs., sacked.....\$4.00 Per 50 lbs., sacked.....\$2.10
8 1/2 lbs., sacked......60

CONKEY'S POULTRY FEED

CONKEY'S BUTTERMILK STARTING FEED—This feed is low in fibre, rich in mineral matter and contains the right amount of protein to insure good digestion and proper growth.

Per 100 lbs., sacked.....\$5.25 25 lbs., sacked.....\$1.40
Per 10 lbs., sacked......75 5 lbs., sacked......50

CONKEY'S BUTTERMILK GROWING MASH—Feed this after your chicks are eight weeks old.

Per 100 lbs., sacked.....\$4.75 25 lbs., sacked.....\$1.25

PRACTICAL POULTRY PRODUCTION.—A standard book on the subject of poultry raising, either on a small or large scale. The book is compiled by Harry M. Lamon, senior poultryman of the Bureau of Animal Husbandry of the United States Department of Agriculture and Jos. Wm. Kinghorn, junior poultryman of the Bureau of Animal Husbandry of the United States Department of Agriculture. It is a very complete treatise, thoroughly illustrated, bound in cloth, and will be found very useful for both the amateur as well as the professional poultry man.

Price each.....	\$2.00
-----------------	--------

FEED AND LIVESTOCK SUPPLIES

DIGESTER TANKAGE.—Tankage has a guaranteed protein content of 60 per cent. It is a meat product made from meat scraps and fatty materials properly cooked under high pressure, and is very palatable to hogs. A regular feeding of tankage in the ration makes heavier hogs, reduces the cost of feed, and builds bone and muscle.

Per 100 lbs., sacked.....	\$4.00
---------------------------	--------

COTTON SEED MEAL.—This feed is a by-product of Cotton Seed Oil, and is a high protein feed, costing somewhat more than oil meal. It has been found to be a valuable addition to the ration for cattle and other live stock, and is much in demand.

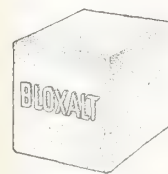

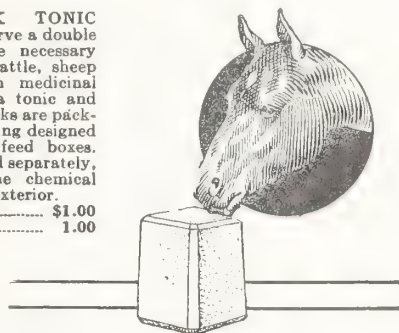

Per 100 lbs., sacked.....	\$3.25
---------------------------	--------

LINSEED OIL MEAL.—A high protein feed obtained from Flax as a by-product of Linseed Oil Mills. It is a 36 percent protein feed and comes packed in 100 lb. bags.

Per 100 lbs., sacked.....	\$3.00
Per 2000 lbs., sacked.....	\$7.00

CAREY-IZED STOCK TONIC BLOCKS AND BRICKS serve a double purpose in furnishing the necessary salt required for horses, cattle, sheep and hogs, combined with medicinal ingredients which act as a tonic and worm killer. The 3-lb. bricks are packed twelve to the carton, being designed for use in mangers and feed boxes. The 50-lb. blocks are packed separately, each container having the chemical analysis printed on the exterior.

12. 3-lb. bricks, per carton.....	\$1.00
50-lb. blocks, each.....	1.00

SALT BLOCKS.—For pasture use it is very convenient to have your salt supply in block form, as the blocks may be set out in the pasture where the stock can get at them any time during the day. These blocks weight 50 pounds each, and are easy to handle.

50 lb. blocks, each.....	\$.75
--------------------------	--------

STOCK AND DAIRY SALT.—Every livestock raiser knows that he must have a supply of pure salt on hand to keep his livestock in the best condition. Cutler-Magner Salt comes put up in 50 and 100 pound bags and is very convenient for use in this form.

50. lb bags, each.....	\$.80	100 lb. bags, each.....	\$1.40
300 lb. barrels, each.....	\$4.00		

BLATCHFORD'S PIG MEAL is a concentrated food fed the same as milk, containing just the right percentage of vegetable protein, fat, carbohydrates, etc., to be a real milk substitute and to fit the particular needs of the infant pig.

25 lb. sacks, each.....	\$1.25	100 lb. sacks, each.....	\$4.75
-------------------------	--------	--------------------------	--------

DRIED BEET PULP.—Is very palatable to milk cows and other livestock, as it is a by-product of beet sugar factories. It contains a high percentage of protein, and produces excellent results. Ask for special price on ton lots.

Per 100 lbs., sacked.....	\$2.75
Bran.—Sacked, per 2000 lbs.....	\$30.00
Shorts.—Sacked, per 2000 lbs.....	30.00
Ground Corn and Oats.—Sacked, per 2000 lbs.....	31.00

FARGO SEED HOUSE

MISCELLANEOUS SUPPLIES

PURINA COW CHOW—This dairy feed is scientifically mixed containing ingredients that will give your cows increased milk production. The Purina slogan is "For every pound of Cow Chow fed, an extra pound of milk." Write for a new 1926 Purina Cow Book which contains a lot of useful information, as well as telling in detail what Cow Chow is made of and why you should feed it.

Per 100 lbs., sacked..... \$3.15 Per 2000 lbs., sacked..... \$60.00

PURINA CALF CHOW—Feed your calves Calf Chow and watch them grow. For the first four weeks mix with milk, then for the next four use water only. After this time feed dry in troughs until at least six months old.

Per 25 lbs., sacked..... \$1.35 Per 100 lbs., sacked..... \$5.00

PURINA PIG CHOW—Purina Pig Chow is not a complete hog ration nor a substitute for home grown grains. It is made for the purpose of adding materials that you cannot raise, such as minerals and proteins which are lacking in home grown grains. Raise all the feed you can on your own farm and add enough Pig Chow to supply what your home grown grains lack.

Per 25 lbs., sacked..... \$1.00 Per 100 lbs., sacked..... \$3.50
Per 2000 lbs., sacked..... \$67.00

BLATCHFORD'S CALF MEAL.—

This preparation is made for the express purpose of enabling you to raise calves without milk. By closely following the instructions which are given with each package, practically 100 percent results are obtained in producing strong healthy calves at a much less cost than raising them on milk. It is easy to feed, and the directions are simple. It is only necessary to mix the calf meal with hot water, and feed three times a day.

25 lb. sacks, each..... \$1.50
50 lb. sacks, each..... \$2.75

MIDGET SPRAYER

A small, well made sprayer for general purposes and especially adapted for use in and about the home. Will handle all kinds of liquids satisfactorily. The pointed nose of the pump passes through the top of

the tank, keeping air nozzle in line, and adds considerably to the strength of the whole sprayer. Made of first-class materials, carefully tested and packed and will give entire satisfaction.

No. 202, Midget, one pint, each.....\$.50

No. 530, HUDSON CRESENT SPRAYER.—A popular pattern because any quart size Mason jar may be used as a tank. Double discharge tubes. Throws wide fan shaped spray.

Each.....\$.75

HUDSON RAPID SPRAYER.—The Rapid is equipped with two discharge tubes making a wide fan shaped spray and increasing the speed with which the work can be done.

Each.....\$.75

HUDSON EASY SPRAYER.—This is a small compressed air sprayer with a tank holding about a gallon of liquid. It is equipped with regulation spray nozzle, the valve of which is operated by hand. A very handy implement for those desiring a sprayer one-half way in size between the three and four gallon and the smaller hand sprayers.

Each.....\$2.50

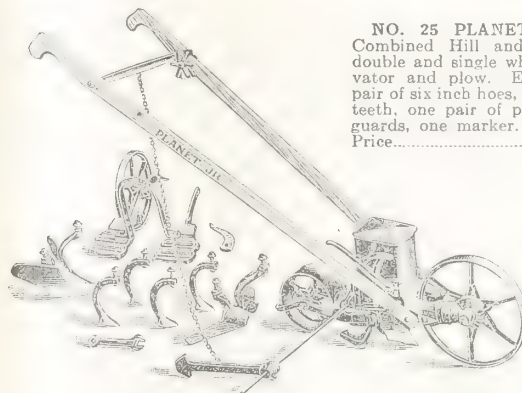

HUDSON CONTINUOUS SPRAYER.—It is adapted for use with insecticides, disinfectants, etc., as it delivers a fine even spray continuously. This sprayer comes equipped with two nozzle tips and is a splendid general purpose sprayer

Each.....\$.85

WESTERN FOLDING BERRY BOXES

This is undoubtedly the strongest, most convenient and most durable folding berry box ever offered to berry growers. The folds are so constructed that the box is easily and quickly folded and made ready for use and at the same time holds a rigidity of form that is quite as firm as an all staple box.

Quart boxes per doz.....\$.20
Quart boxes per hundred..... 1.50

FARGO SEED HOUSE

GREENHOUSE AND NURSERY DEPARTMENT

Our vegetable and flower plants are all grown in local greenhouses from strong transplanted seedlings under expert supervision. In this way the weak plants are eliminated and all of them develop strong compact root systems and sturdy growth giving you the best assurance of success.

Parcel Post.—Orders for plants in small quantities of \$1.00 or less can be sent by mail. When ordering this way add 15 cents postage to your remittance. Larger orders must be sent by Express.

Potted Plants.—When ordering potted plants add 10% to the list price to cover cost of boxing and crating. We ship potted plants either in paper pots or well wrapped to reduce shipping weight.

Be sure to remit full amount as we do not send plants C. O. D.

VEGETABLE PLANTS

TOMATOES—Earlianna, Ponderosa, John Baer, Bonnie Best, Early King, Dwarf Champion, Yellow Plum, Burbank (earliest)
Per doz.....\$.30 Per flat of about 150 plants..... 2.50

Potted Tomato Plants—

4-in. in paper pots, each..... .15 Per doz..... 1.50
3-in. in paper pots, each..... .10 Per doz..... 1.00

CABBAGE—Early Jersey Wakefield Late Flat Dutch, Copenhagen Market, Danish Ballhead, Holland.
Per doz..... .25 Per flat of about 150 plants..... 2.00

FROST PROOF CABBAGE PLANTS—These plants are grown out of doors early in the spring along the Atlantic Coast in South Carolina. Frequent frosts toughen the young growing plants so that they do not have to be hardened off as green house plants do and therefore can be set out with safety much earlier. All orders are shipped direct from growers, postage paid at the following prices. If you prefer shipment by express, prices quoted are F.O.B. Shipping point.

The varieties offered include: Early Jersey Wakefield, Charleston Large Type Wakefield, Copenhagen Market, Succession, Early Flat Dutch.

GARDEN SEEDS

WE PAY POSTAGE UP TO 20 CENTS ON ALL ORDERS FOR GARDEN AND FLOWER SEEDS

ASPARAGUS

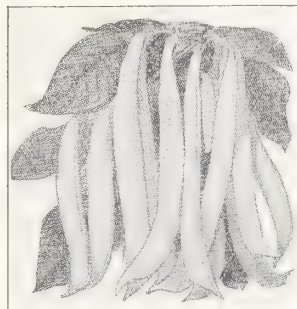

CONOVER'S COLOSSAL—This is one of the largest and most widely used varieties on the market. The shoots are bright green color slightly tinged with purple and are very tender and have a fine flavor. Pkt. 10c; oz. 15c; lb. 90c.

BEANS

IMPROVED GOLDEN WAX—A medium early variety and a heavy cropper. The vines are bushy and vigorous and quite rust resisting. One of the best of the yellow podded stringless varieties. $\frac{1}{3}$ Pt. 10c; Pt. 25c; Qt. 40c.

PROLIFIC BLACK WAX—Another fine yellow podded stringless wax bean. Seed when mature is a beautiful purplish black color and the young pods are long, crisp and tender. $\frac{1}{3}$ Pt. 10c; Pt. 20c; Qt. 30c.

BURPEE'S GREEN POD BUSH STRINGLESS—Introduced by the Burpee's, this variety is unsurpassed in quality in its class. It is early, extremely prolific and will bear an abundant delicious crop of rich flavored green podded beans from early July until frost. $\frac{1}{3}$ Pt. 10c; Pt. 30c; Qt. 50c.

WEBER WAX—Very similar in utility and period of ripening to Wardwell's Wax Bean or Davis Kidney Wax Bean. Pod is bright yellow in color and the vine is very prolific and vigorous. $\frac{1}{3}$ Pt. 10c; Pt. 30c; Qt. 50c.

BURGER'S GREEN POD POLE STRINGLESS—One of the best tall growing varieties which is fine either for using green or for baking when the seed is mature. $\frac{1}{3}$ Pt. 10c; Pt. 30c; Qt. 50c.

KENTUCKY WONDER—This variety holds the same position among the tall green pod beans that Burpee's Stringless Green Pod holds among the short growing varieties. The pods are fleshy, attaining a length of about 7 inches when young and will bear throughout the season if they are kept picked. A truly wonderful sort. $\frac{1}{3}$ Pt. 10c; Pt. 30c; Qt. 50c.

BURPEE'S BUSH DWARF LIMA—The earliest of the large seeded Limas. Plants are very vigorous and productive and the pods are medium length growing about 5 inches long. A splendid form of the bush lima, best adapted to the Northwest. $\frac{1}{3}$ Pt. 15c; Pt. 45c; Qt. 75c.

NAVY BEANS—The best variety of bean for field culture and baking purposes. Our stock is northern grown which insures certainty of maturing in this latitude. $\frac{1}{3}$ Pt. 5c; Pt. 15c; Qt. 25c.

GREAT NORTHERN BEANS—Another very desirable variety for baking. The seed is nearly twice as large as the Navy Bean, quite flat and kidney shaped. When cooked, very rich and mealy. $\frac{1}{3}$ Pt. 5c; Pt. 15c; Qt. 25c.

BEETS

EARLY BLOOD TURNIP—One of the old favorite varieties. Roots nearly round though slightly flattened. Dark red in color, interior somewhat purplish. Crisp, tender and sweet. Pkt. 5c; oz. 10c; lb. 50c.

DETROIT DARK RED—Considered by many the best Beet for the market and home garden. The tops are small and upright in growth and the roots medium size, smooth and nearly round. Deliciously sweet and tender. Pkt. 5c; oz. 10c; lb. 50c.

EARLY FLAT EGYPTIAN—Considered the best variety for forcing as it is extremely early. The roots are very dark red and quite flat at the bottom. The flesh is crisp and tender and a fine flavor. Pkt. 5c; oz. 10c; lb. 50c.

SUGAR BEETS

VILMORIN'S IMPROVED—One of the standard varieties of Sugar Beets grown extensively for sugar making purposes. This variety was originated in France and has been improved since its introduction. Pkt. 5c; oz. 10c; lb. 40c.

KLEIN WANZLEBEN—Slightly larger than Vilmorin's Improved and a little easier grown. The tops are large and leaves somewhat curled. Under careful growing conditions will yield from 12 to 18 tons per acre. Pkt. 5c; oz. 10c; lb. 40c.

MANGEL WURZEL

IMPROVED MAMMOTH LONG RED—The name well describes it. Roots are long, uniformly straight and bright red in color. The flesh is white, tinted with rose. Very productive. Pkt. 5c; oz. 10c; lb. 40c.

GOLDEN TANKARD—The best of the yellow varieties. The tops are rather small but the roots are large and frequently larger at the bottom than at the top. The color is a deep orange below ground and the flesh is yellow, tinged with white. Easiest variety to dig. Pkt. 5c; oz. 10c; lb. 40c.

BRUSSELS SPROUTS

Considered by many to be one of the most highly prized table delicacies, excelling any variety of cabbage. The plant resembles the cabbage, the edible part being very small heads forming on each side of the stock at each leaf joint. Pkt. 10c; oz. 20c; lb. \$1.50.

CABBAGE

EARLY JERSEY WAKEFIELD—This splendid variety is the earliest and one of the surest heading of the early cabbages. Heads small and cone shaped but very solid and of fine quality. Pkt. 10c; oz. 20c; lb. \$1.75.

COPENHAGEN MARKET—The earliest large round headed variety on the market. It is considered by many market gardeners as the most profitable variety which they can grow as a second early crop. Splendid flavor and a fine keeper. Pkt. 10c; oz. 20c; lb. \$1.40.

ENGHUIZEN—Another early variety that is popular because of its large globular heads. The outside leaves are quite spreading and unusually curled and frilled. Heads are very solid and of fine quality. Pkt. 10c; oz. 20c; lb. \$1.40.

LATE DWARF FLAT DUTCH—A splendid short stemmed round headed late variety. A sure header and while the heads are flat still they are deep, solid and of excellent quality. Pkt. 10c; oz. 20c; lb. \$1.35.

HOLLANDER OR DANISH BALL HEAD—This variety has a medium stem and large round heads, solid and of very good quality. A sure heading variety and excellent for shipping or storing. We can conscientiously recommend this variety amongst the later sorts. Pkt. 10c; oz. 20c; lb. \$1.35.

RED DANISH—One of the largest and surest of the late varieties. The plants have a medium length stem and are very vigorous. Rather late maturing with large round solid heads of an attractive deep red color. Pkt. 10c; oz. 20c; lb. \$1.35.

EARLY DWARF FLAT DUTCH—Early, very short stemmed with large somewhat flattened solid heads. Pkt. 10c; oz. 20c; lb. \$1.35.

CAULIFLOWER

EARLY SNOWBALL—The earliest maturing strain of the short leaved Snowball type. A splendid forcer and one of the best varieties for both home and market purposes. Heads are large, compact, round and very white. Our stocks are selected by most careful growers and we can recommend this seed without hesitation. Pkt. 20c; oz. \$1.25.

CARROTS

DANVERS HALF LONG—A very desirable second early variety for the home garden. Flesh is deep orange color and a fine flavor. Pkt. 5c; oz. 10c; lb. 75c.

CHANTENAY—Considered one of the best of the half long varieties. Medium early and of fine quality. The roots are slightly tapering, smooth and very crisp and tender. Pkt. 5c; oz. 10c; lb. 75c.

OXHEART OR GUERANDE—This variety is especially recommended for hard heavy soils where the longer rooted varieties do not give satisfactory results, as the roots are short and thick. The flesh is fine grained, sweet and tender. Pkt. 5c; oz. 10c; lb. 75c.

YELLOW BELGIAN—The best variety for field culture for livestock feed. A very heavy yielder and a fine keeper. Pkt. 5c; oz. 10c; lb. 65c.

CELERY

WHITE PLUME—One of the handsomest of the celery family. The leaves are bright green at base shading to white at top. Very desirable for home culture as the plant bleaches in a much shorter time than is usually required for other varieties. Crisp, tender and of fine flavor. Pkt. 10c; oz. 25c; lb. \$1.75.

SWISS CHARD

SEA KALE BEET—This plant really belongs to the Beet family although the tops are used for greens, the roots not developing sufficiently to be of any value. It is indispensable in the home garden to furnish a supply of greens throughout the summer after the Spinach crop has gone to seed. Pkt. 5c; oz. 10c; lb. 50c.

CITRON

EARLY RED SEEDED—Used exclusively for "preserves" or pickles. Flesh is white and solid but not suitable for eating raw. Pkt. 5c; oz. 10c; lb. 50c.

CORN SALAD

LARGE LEAVED DUTCH—A small fast growing salad plant for late fall and winter use. The leaves can be substituted nicely for lettuce and spinach. Pkt. 10c; oz. 15c; lb. \$1.00.

FARGO SEED HOUSE

CUCUMBER

EARLY FRAME—The earliest and best of the English Frame Cucumbers. Uniform in size but slightly shorter than the larger English varieties. Pkt. 10c; oz. 15c; lb. 90c.

CHICAGO PICKLING—Considered one of the best pickling Cucumbers on the market. The fruits are of a fine shape pointed at both ends and the proper size to be ideal for pickling. Has brown spines when ripe. Pkt. 10c; oz. 15c; lb. 90c.

GREEN CLUSTER—A very productive early variety. Vines are vigorous and hardy bearing fruits in clusters of two and three. An excellent variety for the home garden. Pkt. 10c; oz. 15c; lb. 90c.

LONG GREEN—The most extensively used of the larger varieties for the home and market garden. Rather late but a standard variety for making sweet pickles and for slicing. The fruits are very long, sometimes measuring 12 to 15 inches. Pkt. 10c; oz. 15c; lb. \$1.30.

IMPROVED WHITE SPINE—The fruits are uniformly straight and covered with White Spines and when mature measure about 7 inches. Crisp, tender sweet and fine for slicing. Pkt. 10c; oz. 15c; lb. 90c.

CHICORY

WITLOOF—The dried and prepared roots are frequently used as a substitute for Coffee. The young leaves may be used in the spring for salad. Roots stored in sand may also be sprouted indoors in the winter. Pkt. 10c; oz. 25c; lb. \$1.50.

CHIVES

Similar in appearance and flavor to onions and much used for salads and soups. Pkt. 10c; oz. 50c.

CARAWAY SEED

An old favorite garden herb, the seeds of which are used for flavoring in confectionery, cakes, etc. Pkt. 10c; oz. 15c; lb. \$1.00.

DILL

One of the most useful herbs and very largely consumed in the making of dill pickles. Pkt. 10c; oz. 15c; lb. 90c.

EGG PLANT

BLACK BEAUTY—The fruits are dark purple in color, large and cymetrical, plants maturing earlier than other varieties. For best success, seed should be started indoors and plants set outside in the garden when danger of frost is past. Pkt. 10c; oz. 50c.

ENDIVE

LARGE GREEN CURLED—One of the best salads for fall and winter use. Also useful for greens and for flavoring soups and stews. Pkt. 10c; oz. 15c; lb. \$1.00.

GROUND CHERRY OR HUSK TOMATO

Used very generally for preserves. Fruits are yellow about ½-inch in diameter and inclosed in a loose husk. Pkt. 10c; oz. 40c; lb. \$3.75.

KALE OR BORECOLE

This plant grown from seed sown early in the spring, makes excellent greens. It should be cooked either like Asparagus or Spinach. A much desired table delicacy. Pkt. 10c; oz. 15c; lb. 80c.

KOHLRABI

The edible part of this plant is the turnip shaped bulb which forms above the ground. It combines to some extent the flavors of both turnip and cabbage and is very tender and appetizing when used before fully grown. Pkt. 10c; oz. 20c; lb. \$1.25.

LEEK

LARGE MUSSELBERG—This plant belongs to the onion family and is a fine substitute for green onions in the fall and winter. Should be gradually earthed up like celery when being grown. Pkt. 10c; oz. 25c; lb. \$1.60.

LETTUCE

BIG BOSTON HEAD—One of the standard sorts for outdoor culture both for the home garden and for the market. Leaves are broad and fairly smooth. Heads are large but solid and crisp. Pkt. 10c; oz. 15c; lb. \$1.40.

EARLY PRIZEHEAD—This variety is a large loose heading sort and is really more of a leaf lettuce. The outer leaves are shaded brown at the edge and it is a very popular kind for the home garden. Tender and sweet. Pkt. 10c; oz. 15c; lb. \$1.40.

EARLY CURLED SIMPSON—White seeded. Similar in appearance to the Early Curled Slesia. A standard old variety. Somewhat dwarfed and compact in habit of growth. Crisp, finely curled and tender. Pkt. 10c; oz. 15c; lb. \$1.25.

GRAND RAPIDS—The leading leaf lettuce for the market garden. Also a splendid greenhouse forcing variety. A fast grower, fine flavor and quality, and keeps well after cutting. Pkt. 10c; oz. 15c; lb. \$1.25.

MUSKMELON

EXTRA EARLY HACKENSACK—One of the earliest and also one of the best varieties for the Northwest. Heavily netted. The flesh is green in color and of delicious flavor. Pkt. 10c; oz. 15c; lb. 80c.

EARLY OSAGE—Generally conceded to be the best and earliest of the salmon fleshed varieties of Melons. The flesh is thick, the seed cavity small and the flavor excellent. Pkt. 10c; oz. 15c; lb. 80c.

MUSTARD

WHITE LONDON—The leaves of this plant may be used either for salad or may be cut and boiled like spinach. A rapid grower ready for use six weeks after planting. Pkt. 10c; oz. 15c; lb. 50c.

ONIONS

LARGE RED WEATHERSFIELD—Very extensively grown for home garden use. Very productive and one of the standard flat varieties. Pkt. 10c; oz. 50c; lb. \$3.50.

SOUTHPORT RED GLOBE—A most excellent medium early variety which is known everywhere that onions are grown for market. An ideal shaped globe onion with smooth, glossy red surface. Pkt. 10c; oz. 40c; lb. \$4.50.

YELLOW DANVER'S FLAT—A very productive and extensively used medium early variety and recognized as one of the best of the flat sorts. The flesh is creamy white and the skin light coppery yellow. Pkt. 10c; oz. 30c; lb. \$3.25.

SOUTHPORT YELLOW GLOBE—Extremely productive globe variety similar in general character to the Southport Red Globe. The bulbs are large, almost perfectly round with small necks, and the tops ripen down very evenly. Pkt. 10c; oz. 40c; lb. \$4.50.

WHITE PORTUGAL OR SILVER SKIN—A medium sized flat variety which matures about ten days earlier than the globe varieties. Mild flavor and considered one of the best for green onions for bunching. Pkt. 10c; oz. 30c; lb. \$3.00.

SOUTHPORT WHITE GLOBE—A desirable market variety of globe onion. Large and handsome similar to the other Southport Globes, and a standard for market purposes. Pkt. 10c; oz. 50c; lb. \$6.00.

WHITE QUEEN PICKLING—One of the best white onions for pickling. Crisp, tender with small round bulbs which ripen uniformly. Also fine for green onions. Pkt. 10c; oz. 30c; lb. \$2.50.

ONION SETS

No garden is complete without a planting of onion sets in early spring as they will produce the first harvest of the year. They may be planted as soon as the ground is free enough from frost to be worked, and they are ready for table use usually by the middle of May. We contract our sets with well known growers and are able to supply any quantity from a pint to 100 bushels or more. We carry in stock four varieties—Red Bottom, White Bottom, Yellow Bottom and also the Ebenezer, which is a new variety developed from Japanese seed, and is unusually prolific. Qt. 30c; Pk. \$1.50; Bu. \$5.00.

PEAS

AMERICAN WONDER—Among the extra early wrinkled sorts this little variety is one of the favorites. Vines grow only about 10 or 12 inches high. Pods are rather short but well filled with peas of fine quality. ½ Pt. 15c; Pt. 30c; Qt. 45c.

ALASKA—Commonly known as the canner's favorite as it is used almost exclusively by many large canning factories, since it is a smooth variety and fine quality. The best extra early smooth pea. ½ Pt. 15c; Pt. 30c; Qt. 45c.

MCLEAN'S LITTLE GEM—Another of the very popular extra early wrinkled varieties. The vines are a little longer than the American Wonder, growing 16 to 18 inches but require no support. Pods about 3 inches long filled with excellent quality peas. ½ Pt. 15c; Pt. 30c; Qt. 45c.

LAXTONIAN—A comparatively new variety. Sometimes called the Dwarf Gradus. It is an extra early wrinkled pea but has large pods, profusely productive, and filled with unusually fine quality peas. A giant podded early dwarf. ½ Pt. 15c; Pt. 30c; Qt. 45c.

GRADUS—A favorite second early pea for home and market gardens. It is large, early and unsurpassed in quality and flavor. Vines grow about 30 inches high with pods about 4 inches long. ½ Pt. 10c; Pt. 20c; Qt. 30c.

EVERBEARING—A very excellent tall growing sort for mid summer and early fall production. A very prolific variety with pods about 3 inches long of splendid quality. ½ Pt. 15c; Pt. 30c; Qt. 45c.

CHAMPION OF ENGLAND—A late season tall pea universally recognized as late crop standard for yield and quality. Pods are large and well filled and the peas are of superior flavor. Vines grow about 5-ft. high. ½ Pt. 15c; Pt. 30c; Qt. 45c.

TELEPHONE—Many growers consider this pea the best of the late tall growing kinds. Pods grow about 5-inches long containing 8 or 9 peas in each one. A main crop variety growing about 4-ft. high. ½ Pt. 15c; Pt. 30c; Qt. 45c.

BLACKEYE MARROWFAT—A tall growing late variety of smooth pea which has been a favorite with many gardeners for a long time. A very heavy yielder. ½ Pt. 15c; Pt. 25c; Qt. 35c.

FARGO SEED HOUSE

PARSLEY

MOSS CURLED—A well-known garden plant used for flavoring soups and stews and also for garnishing. The leaves may be used either green or may be dried, powdered and kept in bottles for later use. Pkt. 5c; oz. 10c; lb. 60c.

PARSNIP

HOLLOW CROWN OR GUERNSEY—This old garden favorite scarcely needs any description. The flavor is delicious with the added advantage that they may be harvested when the garden has little else to offer. They may be left in the ground over winter and when dug up in the spring, are just as sweet and delicious as ever. Pkt. 10c; oz. 15c; lb. 50c.

PEPPER

RUBY KING—A fine American variety which is vigorous and productive. Plants about 2½-ft. high, fruits frequently measure four to 4½ inches long. Deep green when young, bright red when ripe. Flesh thick and sweet. Pkt. 10c; oz. 25c; lb. \$2.25.

PIMIENTO—A very productive variety. The fruits have an unusually thick flesh which is mild and a fine flavor. Desired for salads as well as stuffed peppers. Used largely by canners. Pkts. 10c; oz. 25c; lb. \$2.50.

PUMPKIN

SUGAR OR NEW ENGLAND PIE—A fine small variety of excellent quality for making pies. In fact, considered the best for this purpose. Pkt. 5c; oz. 10c; lb. 70c.

CONNECTICUT FIELD—This is the large yellow variety grown extensively for stock feeding and can also be used for making pies when desired. Varies in shape from round and somewhat flattened fruits to those which are quite long. Pkt. 5c; oz. 10c; lb. 70c.

RADISH

FRENCH BREAKFAST—A small olive shaped radish which grows very quickly. Deep scarlet in color except for a spot of white at the tip. Pkt. 5c; oz. 10c; lb. 60c.

LONG SCARLET—The standard long scarlet variety. Fruits are smooth and slender, growing about 1-3 out of the ground. Crisp and tender. Pkt. 5c; oz. 10c; lb. 60c.

EARLY SCARLET TURNIP—One of the earliest varieties known. A red turnip shaped variety with small tops. Should be grown in every garden. Pkt. 5c; oz. 10c; lb. 60c.

EARLY SCARLET TURNIP WHITE-TIPPED OR SPARKLER—A handsome variety similar in habits and growth to the early scarlet turnip but having the added attraction of a large patch of white at the tip. It is fine, either for out of doors cultivation or for forcing. Pkt. 5c; oz. 10c; lb. 60c.

EARLY SCARLET GLOBE—A large bright scarlet variety, uniformly globe shaped. Fine and crisp and ready for use in 25 days from time of planting. Pkt. 5c; oz. 10c; lb. 60c.

WHITE ICICLE—A uniformly tender, sweet variety which should be grown in every garden. Pure white in color, very rapid growing and attains a very large size without becoming pithy. Pkt. 5c; oz. 10c; lb. 60c.

WINTER CHINA ROSE—An excellent winter variety. Skin is smooth of a bright rose color. A very desirable late maturing variety for the home garden. Pkt. 5c; oz. 10c; lb. 60c.

RUTABAGA

American Purple Top—wedge shaped with smooth skin and small neck. Fine grained, sweet flavor. Pkt. 5c; oz. 10c; lb. 45c.

SAGE

A very popular herb for flavoring. Perfectly hardy and extensively grown in the home garden. Pkt. 10c; oz. 40c.

SALSIFY (Oyster Plant)

MAMMOTH SANDWICH ISLAND—A desirable winter vegetable. The fruits are very palatable and nutritious, having a flavor similar to that of Oysters. Usually cooked the same as parsnips. Pkt. 10c; oz. 25c; lb. \$2.50.

SPINACH

BLOOMSDALE SAVOY LEAVED—Spinach is indispensable in every garden. This is a very early variety with thick glossy leaves crumpled and blistered like savoy cabbage. Pkt. 5c; oz. 10c; lb. 30c.

NEW ZEALAND—Should be used extensively to supplement other varieties as it thrives during hot weather when the early varieties are worthless. Leaves are small, broad and pointed and the plants should be grown in hills about two feet apart each way. Pkt. 5c; oz. 10c; lb. 50.

SQUASH

CHICAGO WARTED HUBBARD—The vines are vigorous and productive. Fruits are thickly warted, large and heavy. Flesh is a bright orange yellow, finely grained and of rich flavor. Pkt. 5c; oz. 15c; lb. 90c.

GIANT SUMMER CROOKNECK—Vines are bushy in habit, producing the largest of any of the Crookneck summer Squash, growing sometimes to a length of two feet. Thickly warted. Attractive color and a favorite for both the home and market gardens. Pkt. 5c; oz. 15c; lb. 80c.

DELICIOUS—This small variety has special merit for table use. Considered one of the best fall and winter Squashes on the market, particularly for the home garden. Outside comparatively smooth with a thin but tough green rind. Flesh is a rich golden yellow. Pkt. 5c; oz. 15c; lb. \$1.00.

SWEET CORN

EARLY MINNESOTA—A splendid variety of white corn having 8 to 10 rows of large white kernels. Very productive and fine flavor. ⅓ Pt. 10c; Pt. 25c; Qt. 35c.

PEEP-O-DAY—A very early white corn being a true typical sweet corn in both quality and flavor. An old favorite. ⅓ Pt. 10c; Pt. 25c; Qt. 35c.

COUNTRY GENTLEMEN—This variety should be grown in every garden. It is somewhat later than other varieties, but it excels all of the other white sweet corns in sweetness and flavor. The grains are rather small and round and crowded together in irregular rows. ⅓ Pt. 10c; Pt. 25c; Qt. 35c.

GOLDEN BANTAM—This variety still holds its supremacy as the most desirable sweet corn so far obtainable. It is very early, sweet, tender and of a deliciously rich flavor. ⅓ Pt. 10c; Pt. 25c; Qt. 35c.

STOWELL'S EVERGREEN—Standard main crop sort. It holds its place as one of the favorites year after year. A tremendous yielder and of fine quality, being much in demand especially by canning factories. ⅓ Pt. 10c; Pt. 25c; Qt. 35c.

TOMATO

ACME—Medium early variety with sturdy, large and productive vines. Fruits are purplish red, smooth and free from cracks and of fine quality. Pkt. 10c; oz. 25c; lb. \$2.75.

LIVINGSTON BEAUTY—An excellent variety for the market gardener as it is very prolific and a fine keeper. Fruits are smooth, almost round and purplish red in color and of superior quality. Pkt. 10c; oz. 25c; lb. \$2.75.

EARLY MINNESOTA—One of the earliest varieties obtainable, introduced a few years ago in Minnesota. It has fruit of excellent quality and is a good yielder. Deep red in color. Pkt. 10c; oz. 25c; lb. \$2.00.

EARLIANA—An old popular favorite among the earlies. Has vigorous vines and fruits are large and smooth with very few rough ones in evidence. Compact in habit with stout joints and branches. Good quality and flavor. Pkt. 10c; oz. 25c; lb. \$2.25.

PONDEROSA—This variety is rightly called the Giant Tomato. It is the monarch of the large fruited varieties. Fruits grow in clusters with many of them oblong in shape, usually ribbed and of a deep purplish red color. Thick flesh and small seed cavity. Pkt. 10c; oz. 40c; lb. \$4.50.

JOHN BAER—A comparatively new variety among the extra earlies. Just a trifle later than the Earliana but it is a heavier yielder and, if anything, a little better in quality. A very attractive and desirable variety for any garden. Pkt. 10c; oz. 25c; lb. \$2.50.

BURBANK—One of the prize introductions of Luther Burbank, the plant wizard. It is the earliest variety obtainable, maturing fruits several days ahead of Earliana and of a quality unsurpassed either in flavor or texture by any of the later varieties. Pkt. 20c; oz. 50c; lb. \$7.00.

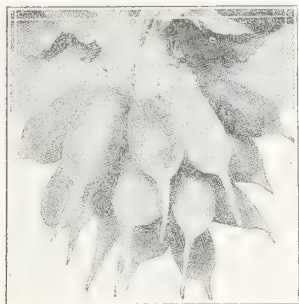

GOLDEN QUEEN—The most desirable of the Yellow varieties. Fruits are large and smooth, bright yellow in color and of superior flavor. Pkt. 10c; oz. 25c; lb. \$2.75.

TURNIP

PURPLE TOP WHITE GLOBE—Very popular on account of its fine quality. The flesh is firm, sweet and finely grained, being an excellent variety for table use and at the same time, a large enough yielder to be raised in quantities for feeding stock. Pkt. 5c; oz. 10c; lb. 45c.

WATERMELON

EARLY LITTLE SUGAR—The only variety of Watermelon we have been able to find which will mature consistently in North Dakota. Fruits are mostly small and round, slightly larger than the average Muskmelon. Very sweet and of fine flavor. Pkt. 5c; oz. 15c; lb. 85c.

FLOWER SEEDS

SWEET ALYSSUM—Little Gem—A dwarf plant covered with snow white blossoms. Pkt. 10c; Oz. 25c.

AGERATUM—Dwarf compact plants covered with blue flowers. Fine for borders. Pkt. 10c; Oz. 20c.

ANTIRRHINUM—(Snapdragon)—Beautiful large flowers packed on a sturdy stem. Pkt. 10c; Oz. 30c.

ASTERS—Queen of the Market—Very early, rather small, bloom profusely. Pkt. 10c; Oz. 50c.

EXTRA FINE MIXED—Including all named varieties. Each 5c; ten 35c; hundred \$2.50.

ORDER SHEET FOR

From the **FARGO SEED HOUSE**

Fargo, North Dakota

CARBOLA

Carbola.—This preparation is used instead of whitewash, and also as a disinfectant. It is better than whitewash because it dries perfectly white, and adheres to the walls, ceilings, etc., better than whitewash. It is a splendid disinfectant for use in barns, poultry houses, cellars, etc., and yet non-poisonous. It can be sprayed on the floors and feed boxes of poultry houses without any danger of the poultry being poisoned from it. In addition to its disinfectant qualities, it also helps to maintain sanitary conditions by making the inside of all buildings much lighter, and light itself is a splendid disinfectant. It is a whitewash and disinfectant combined in powder form that is ready to use as soon as mixed with water, and is applied with brush or spray pump. It makes work easy, saves time, and gives better results.
